

Flexible solutions for server handling

Lifting trolleys designed to support efficient,
safe and ergonomic handling of servers

 **PRONOMIC**[®]

Telescopic mast

Reach your desired heights

While traveling through a data center, passing through low doorways is common. Our telescoping mast allows you to travel through any doorway and still reach the highest desired position in any server rack. It also comes with the benefit of higher lifting speed.

Variety of platform heights

How low will you go

While reaching the top rack is important, aligning a load with the lowest rack is just as vital. With the variety of specifically adapted platforms, placing the load exactly where it is needed is a breeze.

Over load protection

Peace of mind

Never run the risk of injuries or damaged goods due to overloading the lifting trolley. Over load protection prevents the trolley from lifting more than the equipment will allow.

Swivel wheels

Maneuverability in tight spaces

Swivel wheels are easy to steer while operating with an extremely narrow turn radius. This proves beneficial in tight spaces and while quickly placing the trolley in a working position.

Optimal weight capacity ratio

Travel lightly

No need to carry more weight than absolutely necessary. With an optimized weight capacity ratio you can be rest assured the total weight is kept at a minimum.

Stepless control

Total control over the load

The stepless control allows you to control the load at any required speed. This provides a perfect combination of the need for speed and the fine tuning required to position the load properly.

Adjustable handlebars

Ergonomic handgrip for all

Be sure you reduce the strain on muscles and joints during operation by adjusting the handlebars to the optimal working height .

Central brake system

Keep the wheels in place

The central brake system keeps the operator in control of the trolley. Choose to allow the wheels to swivel for optimal maneuverability in tight spaces, apply the directional lock when stability is required over long stretches, or prevent the trolley from moving at all by applying the brake; all with just the press of a foot.

Flexible options for the best solution

Just as data centers are built to be flexible, scalable and above all optimized, our trolleys are modular for the exact same reasons. Our trolleys can be adapted to any work environment or work practices.

Caster options

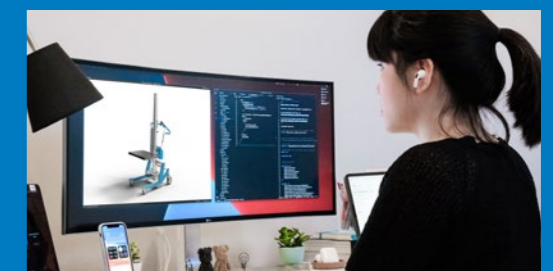

Depending on the floor design of each data centre and various thresholds encountered, best performance is guaranteed with a choice between various options of caster wheels.

Platform options

Server rack types and mounting procedures will all play a role in choosing the correct lifting platform. Our team offers several options to accommodate specific needs.

Mast and base options

Thresholds, doorways and so much more all play vital parts in how each trolley is designed. No matter the specifics of the location, our team is confident we will design the best solution. With our modular design concept we can accommodate your requirements.

Pronomic supports you in reaching your goals

Pronomics innovative solutions increases your economic productivity, enhances your resource efficiency and improves the safety of the work environment.

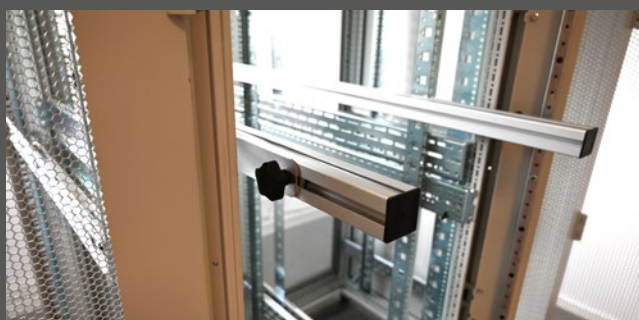

Pronomic lifting trolleys reduces the strain of heavy lifting and prevents accidents during the handling of servers, both during transport and while mounting. This reduces the number of incidents that may inflict injuries to staff and damage to materials.

The solution also allows for a more efficient use of resources; doing more with less. With the help of our lift trolleys one person can mount a server safely and efficiently that would have previously required two people.

Useful accessories enhancing the workflow

Keep what you need at hand; work and time flows more smoothly and efficiently. Smart useful accessories optimize your equipment to support you in your daily work.

Travel as one unit and attach the accessories you need to the lifting trolley. We have an assortment of smart add ons such as step ladder, tool tray, mast protection, charger stand, power drive and our unique server mounting support kit. Everything carefully designed to support you in your work.

Server mounting support kit

For more than 30 years customers have chosen and kept Pronomic as their preferred supplier.

Pronomic has been developing lifting solutions for various sectors since 1989, we are world wide suppliers of lifting trolleys. Our modular ergonomically adapted lifting products and solutions help our customers to increase their productivity while simultaneously improving their work environment.
